

## Procurement Manager

At Stiesdal Hydrogen, we offer the opportunity to make a real difference in the fight against climate change. Our team of creative thinkers is making a true impact and joining us could be one of the most exciting and fulfilling steps of your career.

### Are you up for the challenge?

We are looking for a Procurement Manager who can play a pivotal role in executing our unique design strategy. At Stiesdal Hydrogen, our design is not only optimized for manufacturing but is also conceptually adapted for module and sub-module outsourcing in collaboration with some of the world's leading industrial manufacturing companies. This strategy limits the focus on procurement and assembly at the parts level, instead ensuring the seamless integration of large-scale modules into our assembly processes.

### Hydrogen electrolyzers, from concept to commercial scale

You will be working with our dedicated team to optimize procurement strategies and deliver value across the sourcing process. As we are already well underway in transitioning from concept to commercial scale, your role will be crucial in ensuring that our procurement processes align with our rapid growth and evolving business goals.

### Your primary tasks will be:

- **Outsourcing Strategy:** Working closely with global industrial leaders to secure high-quality modules and sub-modules, ensuring they align with our design for manufacturing principles.
- **ERP and Stock Management:** Playing a key role in the implementation of our ERP system, you will be responsible for establishing efficient stock procedures and ensuring they support our scaling operations.
- **Spare Parts Processes:** Developing processes and methods for managing spare parts inventory and ensuring the service organization has the necessary parts and resources to maintain operational efficiency.
- **Supplier Collaboration:** Building and maintaining strong relationships with our suppliers to ensure alignment on cost, quality, and delivery reliability.
- **Value Creation:** Collaborate to continuously improve the procurement process, from supplier selection to contract negotiation, while ensuring optimal value in all sourcing activities.
- **Production Timing and Load Planning:** Actively participating in production planning by coordinating with suppliers to ensure timely delivery of components in sync with the production schedule, optimizing the tact of receiving modules for seamless production flow.

## **Your profile**

You possess a strong business acumen with extensive procurement experience, particularly in high-volume products on a global scale. Driving down costs while scaling production comes naturally to you. You are open-minded with a holistic, end-to-end value chain perspective, enabling you to navigate complex procurement environments effectively.

In this role, prior experience in leading or contributing to the development of new processes and systems will be highly valuable, as you will play a key role in shaping our procurement and operational strategies. Whether it's optimizing supplier relationships, implementing ERP systems, or developing stock management processes, you thrive on creating efficiencies that support business growth.

Your cross-disciplinary expertise in strategy, economics, sourcing, and production methods gives you the ability to bridge technical and operational challenges. Knowledge in both electrical and mechanical fields is an added advantage that will help you manage the diverse needs of our procurement operations.

We expect you to approach your work with enthusiasm, be self-driven, and bring a passion for making an impact. You are confident taking on significant responsibility and playing a key role in large, complex projects. Just as important, you thrive in fast-paced, innovation-driven environments.

To excel in this position, you must possess excellent communication skills, both written and verbal, and be a strong team player.

## **What we offer**

An exciting and versatile role at Stiesdal Hydrogen, where you engage with cutting-edge technologies and become integral to our mission. We foster a culture of good-spirited teamwork, engagement, flat hierarchy, and continuous learning, centered on trust, transparency, and professionalism.

Enjoy the freedom to influence and co-create your role, with opportunities for professional and personal development, and compensation matching your qualifications.

## **Location**

Stiesdal's activities are spread across several locations in Give, Aarhus, and Copenhagen. Our HydroGen electrolysis team is currently based in Give and Copenhagen.

## **About Stiesdal Hydrogen**

We are committed to developing innovative solutions to bring down the cost of green hydrogen as part of Stiesdal, a fast-growing climate technology group. Read more at [www.stiesdal.com](http://www.stiesdal.com).

## **How to apply**

If you are interested, please send an application and your CV to [jobs@stiesdal.com](mailto:jobs@stiesdal.com).

We will review applications on an ongoing basis and invite relevant candidates for interviews.

Start date: As soon as possible.
